

Check for Understanding Concept Map on the topic “**Authentic Assessment**”

After you have read the material on the topic, fill in the following **Concept “Definition” Graphic Organizer** to demonstrate your understanding of the concepts discussed in the readings and self-check your understanding:

Write down **3 significant things** you have learned from the reading material, explain why and how you will utilize this knowledge in your future teaching:

1. I have learned that assessments should be “student friendly”. Students should see assessments as helpful rather than being afraid of them. In future teaching I will keep this in mind because I want the student to feel like they will be able to succeed on the assessment, and be able to concentrate rather than worrying about if they will “pass” the assessment.

2. I learned the different types of assessments and different ways that the students can be tested through these assessments. This is give the students a chance to be tested from different angles rather then just one kind of assessment if they are not good or do not feel comfortable about that type of assessment.
3. Good learning environments have an impact on the student's ability to learn and take assessments. If the student feels comfortable in their surroundings they will most likely be able to succeed on the assessment.
